Programme Specification

BEng Mechatronic Engineering (2020-21)

This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if s/he takes full advantage of the learning opportunities that are provided.

Awarding Institution: University of Southampton
Teaching Institution: University of Southampton
Mode of Study: Full-time
Duration in years: 3
Accreditation details: Institution of Engineering and Technology (IET)

Final award: Bachelor of Engineering with Honours (BEng (Hons))
Name of Award: Mechatronic Engineering
Interim Exit awards: Bachelor of Engineering (BEng), Certificate of Higher Education (CertHE), Diploma of Higher Education (DipHE)

FHEQ level of final award: Level 6
UCAS code: HH36
Programme Code: 7017
QAA Subject Benchmark or other external reference: Engineering 2010
Programme Lead: Thomas Andritsch (ta1m12)
Pathway Lead:

Programme Overview

Brief outline of the programme

Electrical and Mechatronic/Electromechanical engineering study the theories of electricity, electronics, and electromagnetism and apply them in the operation of electrical and mechatronic/electromechanical devices. At Southampton, we see educating the next generation of engineers as a key role and will ensure that you have a thorough grounding in a wide range of technologies.

All programmes have a number of compulsory modules to ensure the students are exposed to key topics in electrical engineering and mechatronic/electromechanical engineering but have been designed to maximise students’ choice by allowing the students to tailor the structure to suit their own interests. The students can choose areas that reflect their personal interests and work on an individual research oriented project. All of these will stand you in good stead as you move into your career. We offer outstanding facilities in our labs and teaching is based on the latest research, ensuring that, at the end of your programme, your skills will be highly regarded by leading employers. We are proud of the depth of analytical treatment and the specialised optional subjects we offer within our degree programmes.

Your contact hours will vary depending on your module/option choices. Full information about contact hours is provided in individual module profiles.

Learning and teaching
These intellectual skills are taught mainly through coursework and individual and group project work. A range of learning and teaching methods are used on this programme, including:
• Staff-led lectures, demonstrations, laboratories and seminars
• Directed reading
• Student-led seminars and presentations
• Specification, design, analysis, implementation and verification exercises
• Revision for written examinations
• Staff and post-graduate supervision of your research dissertation
• Industrial placements

Assessment
All subject specific skills are assessed through a combination of unseen written examinations and problem solving exercises. Experimental, research and design skills (2-4, 6) are tested through laboratory reports, laboratory logbooks, design exercises, essays and individual and group projects.

Feedback
A range of feedback methods are used on this programme to enable students to gauge their progress in meeting the intended learning outcomes, including:
• Feedback from personal tutor
• Written feedback for large courseworks
• Instant oral feedback on presentations, tutorials and practical laboratories
• Feedback on the overall class performance in particular modules
• Marked coursework

Special Features of the programme

Transfer policy

In addition to Electrical and Mechatronic/Electromechanical Engineering programmes, we have other programmes such as Electronic Engineering (EL) and Electrical & Electronic Engineering (EEE). The entry requirements are different. Likewise, MEng programmes have higher entry requirements than BEng programmes. Part 1 of the above-listed programmes are identical, with the exception that EE and EM students take ELEC1203 Mechanics, while EL students take ELEC1204 Advanced Programming and while EEE students have the choice of either ELEC1203 or ELEC1204. Parts 1 and 2 of BEng programmes are identical to those of the corresponding MEng programmes, but they diverge in part 3. These issues impose complications upon transfers between these programmes, which are resolved as follows.

Students who are thinking about transferring between EL, EEE, EE and EM are encouraged to discuss this with their academic tutors at the earliest possible opportunity. Transfers between these programmes can be arranged at any time, at the discretion of the programme leader of the destination programme. Additionally, the programme leaders will guarantee transfers between BEng EL, EEE, EE and EM at the end of part 1, for students that have passed that part with an overall average (before referral marks are capped) of at least 58% (without rounding up). Likewise, the programme leaders will guarantee transfers between MEng EL, EEE, EE and EM at the end of part 1, for students that have met the same criterion. However, students seeking transfer to EM will also need to have taken ELEC1203, in order to meet this criterion. Students seeking transfer to EE will not need to have taken ELEC1203, in order to meet this criterion, although in this case they are advised to study the topics of ELEC1203 during the summer before beginning part 2. Likewise, students seeking transfer to EL will not need to have taken ELEC1204, in order to meet this criterion, although in this case they are advised to study the topics of ELEC1204 during the summer before beginning part 2.

Similarly, students who are thinking about transferring between BEng and MEng programmes are encouraged to discuss this with their academic tutors at the earliest possible opportunity. Transfers between BEng and MEng programmes can be arranged at any time, at the discretion of the programme leader of the destination programme. Additionally, the programme leaders will guarantee transfers between BEng and MEng programmes
at the end of part 2, for students that have passed that part with an overall average (before referral marks are capped) of at least 58% (without rounding up).

Please note: As a research-led University, we undertake a continuous review of our programmes to ensure quality enhancement and to manage our resources. As a result, this programme may be revised during a student’s period of registration; however, any revision will be balanced against the requirement that the student should receive the educational service expected. Please read our Disclaimer to see why, when and how changes may be made to a student’s programme.

Programmes and major changes to programmes are approved through the University's programme validation process which is described in the University's Quality handbook.

Educational Aims of the Programme

The aims of this programme are to:

- Provide you with a solid foundation that will develop the skills needed for a wide range of professional engineering careers as a high quality practitioner and leader in business, technology, or research.
- Provide you with a balance of theoretical, design and practical subjects which will allow you to exploit your individual talents.
- Provide a flexible academic structure which is relevant and attractive to you, your colleagues and industry and which is responsive to advances in technology and the needs of the industrial and academic community.
- To be at the leading edge of scholarship in Electrical and Mechatronic/Electromechanical Engineering.
- To introduce you to the particular requirements of High Voltage Engineering and Power Systems, in generation, transmission and utilisation.
- Provide you with an environment which develops independent learning and an ethos of lifelong professional development.
- Provide you with a well-found learning environment with sufficient laboratories containing appropriate up- to date equipment and experimental facilities.
- Provide you with a supportive pastoral environment with opportunities for social and recreational activities.

Programme Learning Outcomes

Knowledge and Understanding

On successful completion of this programme you will have knowledge and understanding of:

A1. Demonstrate knowledge and understanding of underpinning key mathematics and science skills appropriate to Electrical or Mechatronic/Electromechanical Engineering,
A2. Demonstrate knowledge and understanding of underpinning principles and concepts applicable to Electrical or Mechatronic/ Electromechanical Engineering,
A3. Demonstrate specialised technical knowledge in chosen specialist applications of engineering,
A4. Demonstrate knowledge of practical, computational and programming skills relating to engineering, and compatible with current industrial practice,
A5. Apply the knowledge and understanding outlined above to the development and evaluation of possible solutions to engineering problems,
A6. Demonstrate awareness of major issues in Electrical or Mechatronic/ Electromechanical engineering research and development, and their possible exploitation to enhance current practices,
A7. Demonstrate awareness of financial, economic, social and environmental factors of significance to engineering.
Teaching and Learning Methods

Courses are taught mainly through Lectures and Directed Reading that are reinforced through Tutorials and Supervisions (in the first two years), Design exercises (in the first two years), Coursework Assignments, and Project Work (both individual and in groups in years two, three and four).

Assessment Methods

Testing of the knowledge acquired is through a combination of unseen written examinations (A1-3, A5-7) and assessed coursework in the form of problem solving exercises (A1-5), laboratory reports (A2-4), design exercises (A3-5), essays (A6,7) and individual and group projects (A1-5, A7). Depending on the coursework students undertake a laboratory experiment, open ended investigation or the development of computer code.

Subject Specific Intellectual and Research Skills

On successful completion of this programme you will be able to:

B1. Integrate knowledge of mathematics, science, information technology, businesses context and engineering practice, to develop analytical and innovate solutions to engineering problems,
B2. Critically analyse and evaluate the extent to which designs and products meet the criteria defined for their current use and future development, taking account of the impact of new and advancing technology to enhance current practice,
B3. Apply in an appropriate manner computer-aided tools in the design process so as to aid understanding of design trade-offs, and recognise capabilities and limitations of computer-based methods for engineering problem solving,
B4. Present effectively to audiences (orally, electronically or in writing) rational and reasoned arguments that address a given engineering problem or opportunity, including assessment of the impact of new technologies,
B5. Recognise the professional, moral and ethical issues involved in the exploitation of technology and science and be guided by the adoption of appropriate professional, ethical and legal practices,
B6. Assess technical and commercial risks, and take appropriate steps to manage those risks in the context of engineering design and solutions.

Teaching and Learning Methods

These intellectual skills are taught mainly through coursework and individual and group project work. Relevant material will be covered in lectures and (for fourth year MEng students) seminars. The School uses Guest Lecturers across a number of courses to bring current industrial and academic thinking into courses.

Assessment Methods

All subject specific skills are assessed through a combination of unseen written examinations and problem solving exercises. Experimental, research and design skills (B2-4, B6) are tested through laboratory reports, laboratory logbooks, design exercises, essays and individual and group projects.
Transferable and Generic Skills

On successful completion of this programme you will be able to:

C1. Make effective use of IT tools including word processing, spreadsheets, CAD drawing packages and CAD modelling and analysis packages. In addition you will be familiar with a programming language, currently C,
C2. Ability to consider given information, extract that which is pertinent to a routine problem and use it in the solution to the problem,
C3. Make effective presentations of technical and related information,
C4. Work independently on a significant technical task,
C5. Ability to work as part of a team, managing both your contribution and the overall tasks,
C6. Effectively present technical material and arguments clearly and correctly in writing and orally,
C7. Work and communicate with others at all levels,
C8. Apply competence in the management of projects, people, resources and time.

Teaching and Learning Methods

Numeracy, general proficiency with IT, and time management pervade the degree; they are not specifically taught. Information retrieval and organisational skills are taught as part of the individual and group projects. Professional development is covered in lectures.

Assessment Methods

Transferable skills are assessed throughout the course as follow:

Skill C1 is assessed throughout the course, the computing skills are largely taught at levels C and I, though addition skills might be involved in level H and M projects.
Skills C2 and C6 are assessed through project and extended essays.
Skills C3 and C7 are assessed through oral and written project work at C, H and M level.
Skills C4, C5, C7 and C8 are assessed through project work, largely at level H for individual skills and at Level M for group skills.

Subject Specific Practical Skills

On successful completion of this programme you will be able to:

D1. Ability to specify, design, and construct Electrical or Mechatronic/Electromechanical systems, taking account of commercial and industrial constraints,
D2. Ability to evaluate designs in terms of general quality attributes and possible trade-offs presented within the given problem,
D3. Ability to use CAD and simulation tools to aid in the design of Electrical or Mechatronic/Electromechanical systems, report and comment on results,
D4. Ability to use test and measurement instrumentation appropriate to the discipline including awareness of measurements accuracy,
D5. Ability to recognise any risks or safety aspects that may be involved in the operation of equipment within a given context,
D6. Can search for information related to a design solution and present it for discussion,
D7. Can develop a project plan, identifying the resource requirements and the timescales involved, including presentation skills both written and oral.
Teaching and Learning Methods

These skills are taught mainly through course and extended project work. Relevant material is also covered in Lectures, Laboratory Sessions and Guest Lectures.

Assessment Methods

Subject Specific Practical Skills are assessed throughout the course as follow:

Skills D1 and D2 are assessed at level H in specific design orientated exercises linked to industrial case studies. Skill D3 is assessed through specific course work.

Skills D4 and D5 are assessed through laboratory-based coursework at levels C and I. In addition specific skills particularly in High Voltage Engineering are taught as required to project students at level H.

Skills D6 and D7 are assessed through project work at level H and M.

Programme Structure

The programme structure table is below:

Information about pre and co-requisites is included in individual module profiles.

Where optional modules have been specified, the following is an indicative list of available optional modules, which are subject to change each academic year. Please note in some instances modules have limited spaces available.

Pathway

Part I
You will study 60 credits under the European Credit Transfer and Accumulation System (ECTS), in years 1, 2, 3 and 4. These credits are at level 4 (Certificate) in year 1, level 5 (Intermediate) in year 2, and level 6 (Honours) in year 3.

A number of exit points are defined:
Students who pass level 4 may exit with a Certificate in Higher Education
Students who pass level 5 may exit with a Diploma in Higher Education Students who pass 30 ECTS in level 6 may exit with an Ordinary Degree

The main areas covered in the first two years are the core electrical and mechanical topics required by Electrical and Mechatronic/ Electromechanical Engineers. In years three and four, the core material covers professional practice, with major individual and group projects, and taught modules covering industrial practice and engineering management. There is also a range of optional modules available. Options such as Robotic Systems give an overview of a specific topic, while others such as High Voltage Insulation Systems and Power Systems Analysis provide students with detailed technical insight to an industrial problem.

Programme details

Course Structure

The information below is liable to change in minor ways from year to year. It is accurate at the time of writing. For the latest information see the ECS Student Handbook, either in the courses office, or on-line at https://secure.ecs.soton.ac.uk/ug/handbook/. Some of these modules are subject to pre-requisites and exclusions that, for brevity, are not given here.
It should be noted that it may not be possible to run some optional modules if the number of students registered on the module is very small. It should also be noted that optional module choice can be restricted by the University Timetable, which varies from year to year: some optional modules may clash with other optional or compulsory modules. Please be aware that many modules are shared between different cohorts; the class size depends on cohort size, which varies from year to year.

The module requirements for each programme (identified by UCAS code) are shown for each Part below; modules are either core (must be taken and passed), compulsory (must be taken) or optional (may be taken).

The modules in Part I, Part II, and Part III are each worth 7.5 ECTS or the multiples of 7.5 ECTS.

Part 1

In your first year, you will take 60 ECTS at NQF Level 4, 30 ECTS in each semester as shown below. Note that all Part I modules are core, and must be passed in order to progress.

Part I Core

<table>

Part III

In your third year, you will take 60 ECTS at NQF Level 6, 30 ECTS in each semester. A major element is the Individual Project, which runs all year. In semester 1, students intending to graduate with a MEng degree must take COMP3219 Engineering Management and Law. Finally, students should select optional modules to make up the total to 60 ECTS. Besides COMP3200 and specialised modules, a maximum of 2 other “externally taught” modules (COMPxxxx, OPTOxxxx, ENTRxxxx, FRENxxxx, GERMxxxx, LANGxxxx, LAWSxxxx MANGxxxx, UOSMxxxx and MATHxxxx) may be chosen.

Part III Compulsory

Progression Requirements
The programme follows the University's regulations for Progression, Determination and Classification of Results: Undergraduate and Integrated Masters Programmes or Progression, Determination and Classification of Results: Postgraduate Master's Programmes. Any exemptions or variations to the University regulations, approved by AQSC are located in section VI of the University Calendar.

Support for student learning
There are facilities and services to support your learning some of which are accessible to students across the University and some of which will be geared more particularly to students in your particular Faculty or discipline area.

The University provides:
- library resources, including e-books, on-line journals and databases, which are comprehensive and up-to-date; together with assistance from Library staff to enable you to make the best use of these resources
- high speed access to online electronic learning resources on the Internet from dedicated PC Workstations onsite and from your own devices; laptops, smartphones and tablet PCs via the Eduroam wireless network. There is a wide range of application software available from the Student Public Workstations.
- computer accounts which will connect you to a number of learning technologies for example, the Blackboard virtual learning environment (which facilitates online learning and access to specific learning resources)
- standard ICT tools such as Email, secure filestore and calendars.
- access to key information through the MySouthampton Student Mobile Portal which delivers timetables, Module information, Locations, Tutor details, Library account, bus timetables etc. while you are on the move.
- IT support through a comprehensive website, telephone and online ticketed support and a dedicated helpdesk in the Hartley Library.
- Enabling Services offering support services and resources via a triage model to access crisis management, mental health support and counselling. Support includes daily Drop In at Highfield campus at 13.00 – 15.00 (Monday, Wednesday and Friday out of term-time) or via on-line chat on weekdays from 14.00 – 16.00. Arrangements can also be made for meetings via Skype.
assessment and support (including specialist IT support) facilities if you have a disability, long term health problem or Specific Learning Difficulty (e.g. dyslexia)

the Student Services Centre (SSC) to assist you with a range of general enquiries including financial matters, accommodation, exams, graduation, student visas, ID cards

Career and Employability services, advising on job search, applications, interviews, paid work, volunteering and internship opportunities and getting the most out of your extra-curricular activities alongside your degree programme when writing your CV.

Other support that includes health services (GPs), chaplaincy (for all faiths) and 'out of hours' support for students in Halls and in the local community (18.00-08.00).

A Centre for Language Study, providing assistance in the development of English language and study skills for non-native speakers.

The Students' Union provides

an academic student representation system, consisting of Course Representatives, Academic Presidents, Faculty Officers and the Vice-President Education; SUSU provides training and support for all these representatives, whose role is to represent students' views to the University.

opportunities for extracurricular activities and volunteering

an Advice Centre offering free and confidential advice including support if you need to make an academic appeal

Support for student peer-to-peer groups, such as Nightline.

Associated with your programme you will be able to access:

- Course books for each year of the programme.
- Library information retrieval seminar.
- Laboratory facilities for experimental work
- Limited mechanical and electrical workshop facilities for project work.
- Small group tutorials in Year 1,
- Supervision classes in Years 1 and 2 of the programmes.
- Faculty computer workstations and helpdesk
- Personal tutors to assist you with personal problems and to advise on academic issues.
- High developed web site for dissemination of course information and other teaching material
- Access to all academic staff through an open door policy as well as timetabled tutor meetings, appointment system and e-mail.
- Access to one of the largest High Voltage facilities in Europe for projects.
- Research Seminars and invited lectures.
- Information about the membership of the Institution of Engineering Technology.

The University provides:

- library resources, including e-books, on-line journals and databases, which are comprehensive and up-to-date; assistance is given from Library staff to enable you to make the best use of these resources through a range of online and face-to-face workshops on finding information, referencing, critical thinking, dissertation writing and more.
- Academic skills support is provided by the Library, through a comprehensive website, online tools and a year round drop-in service in the Hartley Library, Monday – Friday; guidance and advice about essays, dissertations, referencing, study skills, academic integrity and research skills is given. Bookable 1-2-1 writing support sessions are also provided as part of this service.

Methods for evaluating the quality of teaching and learning

You will have the opportunity to have your say on the quality of the programme in the following ways:

- Completing student evaluation questionnaires for each module of the programme.
- Acting as a student representative on various committees, e.g. Staff/Student Liaison Committees, School Programmes Committee OR providing comments to your student representative to feedback on your behalf.
- Serving as a student representative on Faculty Scrutiny Groups for programme validation.
- Taking part in programme validation meetings by joining a panel of students to meet with the Faculty Scrutiny Group.

Further details on the University's quality assurance processes are given in the Quality handbook.
Career Opportunities

Major employers worldwide are keen to employ our graduates – in electrical power/energy sectors, in electronics industries, in health services and in the finance. We have strong relationships with employers, run our own Careers Hub website (www.ecs.soton.ac.uk/careers) and hold our own annual careers fair.

External Examiner(s) for the programme

Name:  Professor Jan Maciejowski - University of Cambridge
Name:  Professor Joseph Spencer - University of Liverpool

Students must not contact External Examiner(s) directly, and external examiners have been advised to refer any such communications back to the University. Students should raise any general queries about the assessment and examination process for the programme with their Course Representative, for consideration through Staff: Student Liaison Committee in the first instance, and Student representatives on Staff: Student Liaison Committees will have the opportunity to consider external examiners' reports as part of the University's quality assurance process.

External examiners do not have a direct role in determining results for individual students, and students wishing to discuss their own performance in assessment should contact their Personal Academic Tutor in the first instance.

Please note: This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if they take full advantage of the learning opportunities that are provided. More detailed information can be found in the programme handbook.
Appendix 1:

Students are responsible for meeting the cost of essential textbooks, and of producing such essays, assignments, laboratory reports and dissertations as are required to fulfil the academic requirements for each programme of study. In addition to this, students registered for this programme also have to pay for:

Additional Costs

<table>
<thead>
<tr>
<th>Type</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stationery</td>
<td>You will be expected to provide your own day-to-day stationary items, e.g. pens, pencils, notebooks, etc. Any specialist stationery items will be specified under the Additional Costs tab of the relevant module profile.</td>
</tr>
<tr>
<td>Textbooks</td>
<td>Where a module specifies essential (or core) texts, these should be available in the library. Where possible, primary provision will be in electronic format. However, due to demand students may prefer to buy their own copies; these can be purchased from any source. Some modules suggest optional additional or (background) reading texts. The library will hold copies of such texts, or alternatively you may wish to purchase your own copies. Although not essential reading, you may benefit from the additional reading materials for the module.</td>
</tr>
<tr>
<td>Approved Calculators</td>
<td>Candidates may use calculators in the examination room only as specified by the University and as permitted by the rubric of individual examination papers. The University approved models are Casio FX-570 and Casio FX-85GT Plus. These may be purchased from any source and no longer need to carry the University logo.</td>
</tr>
<tr>
<td>Printing and Photocopying Costs</td>
<td>In the majority of cases, coursework such as essays; projects; dissertations is likely to be submitted on line. However, there are some items where it is not possible to submit on line and students will be asked to provide a printed copy.</td>
</tr>
</tbody>
</table>

In some cases you'll be able to choose modules (which may have different costs associated with that module) which will change the overall cost of a programme to you. Details of such costs will be listed in the Module Profile. Please also ensure you read the section on additional costs in the University's Fees, Charges and Expenses Regulations in the University Calendar available at [www.calendar.soton.ac.uk](http://www.calendar.soton.ac.uk).
